## **DETAILED ACTION**

### ***Response to Arguments***

Applicant's arguments, filed 18 June 2008 with respect to the claims have been fully considered and are persuasive. The rejection of Lau has been withdrawn.

### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with James Long on 15 August 2008.

The application has been amended as follows:

Please re-enter claims 7 – 14.

Claim 7 (Currently Amended): A Digital Signal Processor (DSP) for adjusting the volume of a digital signal stored in a data stream, the DSP comprising:

a processing unit for processing the data stream; a first memory coupled to the processing unit for storing a destination volume value; and

a second memory coupled to the processing unit for storing a time\_determining value;

wherein the processing gradually increments a volume level of the digital signal by a volume level increment to the destination volume value within a predetermined time period, any destination volume value is achieved in the digital signal in the same amount of time, and a size of the volume level increment is determined as the destination volume value minus the volume level of the digital signal divided by the predetermined time period. unit adjusts the volume of the signal stored in the data stream according to the time\_determining value such that the adjustment from a current volume value of the signal to the destination volume value is accomplished within a predetermined time.

***Allowable Subject Matter***

Claim 1 – 14 are allowed.

The following is an examiner's statement of reasons for allowance:

Claim 1 – 14 have been amended to claim that the volume level increment is determined as the destination volume minus the volume level of the digital signal divided by the predetermined period.

Lau discusses a destination volume (VOLf), a predetermined period (i.e. clock cycle) and a volume level of a digital signal (VOLi). Lau also discusses how to step up the input volume VOLi to reach the final volume VOLf in the clock cycles. However, Lau does not disclose the specific relation claimed by Applicant. Lau would need to disclose the following  $(VOLf - VOLi)/\text{clock cycle}$ . Lau does not disclose this relation. In Lau the

predetermined time period will always be fixed and there is no need to perform any division.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
